

CVT Practice Test Questions and Answers

1. Atropine increases heart rate by:

- A) Stimulating beta-1 adrenergic receptors
- B) Blocking muscarinic acetylcholine receptors
- C) Inhibiting the sinoatrial node
- D) Increasing vagal tone

2. What does the P wave represent on an ECG?

- A) Ventricular depolarization
- B) Atrial depolarization
- C) Ventricular repolarization
- D) Atrial repolarization

3. Nitroglycerin relieves angina primarily by:

- A) Increasing myocardial oxygen supply via coronary vasoconstriction
- B) Reducing preload and afterload through venous and arterial dilation
- C) Blocking beta-adrenergic receptors
- D) Increasing cardiac contractility

4. What is the function of the sinoatrial (SA) node?

- A) Stimulates ventricular contraction
- B) Acts as the heart's pacemaker
- C) Controls blood pressure
- D) Connects atria to ventricles

Answers: 1-B 2-B 3-B 4-B
